

eTranscript Project

Goal

Enable a more efficient and effective academic record management process across all SUNY institutions.

Why is this important?

The existing process is manual, time-consuming, error-prone, and does not provide students with frictionless access to the full power of the SUNY System.

Objectives

- Reduce time required to request, process, and deliver transcripts.
- Ensure academic transcripts are accurate and standardized.
- Provide students with a more efficient and user-friendly process for managing their academic records, including faster access and smoother course transfers.
- Integrate with existing student information systems to facilitate data exchange.
